

OCEAN RCS

Connected infrastructure for commercial sites

Ocean RCS — Renewable Connected Systems

Investor overview | [TBD: month year]

[IMAGE: Higgsfield: aerial commercial energy + mobility hub, late afternoon, 16:9, no text]

01

The opportunity

Commercial sites need power, resilience, and charging at the same time.

[IMAGE: Higgsfield: commercial rooftop solar at dusk, credible, no neon]

INVESTMENT THESIS

One qualified site can support several infrastructure revenue streams

Solar, storage, EV charging, and electrical upgrades share the same site, interconnection, and customer relationship.

[IMAGE: Real Ocean RCS site photo]

Commercial owners buy energy infrastructure piecemeal and pay for it twice

TODAY

- Separate vendors for solar, storage, and charging
- Service upgrades scoped after the fact
- No single owner of performance

WITH OCEAN RCS

- One EPC integrates the full site stack
- Service and interconnection planned once
- Single accountable delivery partner

Three integrated service lines built on one electrical core

01

Solar + storage

Commercial rooftop and carport solar paired with battery storage for demand and resilience value.

02

EV charging + mobility

DC fast and Level 2 charging for fleets, retail sites, and public mobility hubs.

03

Connected infrastructure

Electrical upgrades, water systems, and selective modular compute where power already exists.

TRACTION

Execution capacity already in place

[TBD]

MW installed or under contract

Source: approved-metrics.md

[TBD]

Active commercial proposals

As of [TBD]

[TBD]

Charging ports deployable

Subject to diligence

All figures to be populated from source/approved-metrics.md only.

A staged rollout that de-risks capital at every gate

Timing illustrative; to be validated per site.

Integrated delivery beats a stack of single-product vendors

Capability	Ocean RCS	Single-product installer	Utility program
Solar + storage design	Yes	Partial	No
EV charging deployment	Yes	Rarely	Incentives only
Service upgrade and interconnection	Yes	Subcontracted	Utility-side only
Single point of accountability	Yes	No	No

Illustrative comparison; validate against named competitors before external use.

Revenue layers stack as each site matures

TAKEAWAY

Illustrative only. Replace with approved model outputs before any external use.

ILLUSTRATIVE — placeholder values, not a forecast.

[TBD: project name] — solar, TPO roof, and storage

LOCATION	[TBD]
SYSTEM SIZE	[TBD] kWdc
STORAGE	[TBD] kWh
STATUS	[TBD]

Only publish once facts are confirmed in source/project-facts.md.

Field-proven operators who build what they sell

THE ASK

Capital to convert a qualified pipeline into operating assets

[TBD]

Target raise

Project equipment [TBD]%

Site development [TBD]%

Working capital [TBD]%

NEXT STEPS

- 1 Review qualified site pipeline
- 2 Confirm diligence data room access
- 3 Agree on term-sheet timeline

Equipment summary

Component	Description	Manufacturer / SKU	Compliance
Modules	[TBD]	[TBD]	[TBD: FEOC / domestic content]
Inverters	[TBD]	[TBD]	[TBD]
Battery storage	[TBD]	[TBD]	[TBD]
DC fast chargers	[TBD]	[TBD]	[TBD]

Detailed SKUs live in the appendix only. No internal margins.
